Description	
Hi,	
Many Parabola systems (including winston) have an old /etc/pacman.d/gnupg/gpg.conf with the following content:	
<pre>no-greeting no-permission-warning lock-never keyserver-options timeout=10 keyserver pool.sks-keyservers.net</pre>	
Instead it should have that:	
<pre>no-greeting no-permission-warning lock-never keyserver-options timeout=10 keyserver-options import-clean keyserver-options no-self-sigs-only</pre>	
Somehow gpg.conf should be updated.	
I've no idea if it's a bug in Parabola or Arch Linux though.
