Description

Hi,

Many Parabola systems (including winston) have an old /etc/pacman.d/gnupg/gpg.conf with the following content:

```
no-greeting
no-permission-warning
lock-never
keyserver-options timeout=10
keyserver pool.sks-keyservers.net
```

Instead it should have that:

```
no-greeting
no-permission-warning
lock-never
keyserver-options timeout=10
keyserver-options import-clean
keyserver-options no-self-sigs-only
```

Somehow gpg.conf should be updated.

I've no idea if it's a bug in Parabola or Arch Linux though.
