

Packages - Freedom Issue #3224

your-freedom and asp are in conflict

2022-04-05 09:06 AM - doolio

Status: not-a-bug	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description <p>It seems your-freedom (20220125-1) and asp (0.5.1-1.5) are in conflict on my i686 machine. What is strange is that I've had asp installed since 2021-11-05 but only now the apparent conflict is detected. In addition, asp is not listed in the 'Conflicts With' field of your-freedom on executing</p> <pre>sudo pacman -Qi your-freedom</pre> <p>However, I do see it listed in the 'Conflicts With' field for your-freedom-20220403-1. I presume it is that version not yet installed that pacman uses to print the conflict message. If asp is now non-free shouldn't it be removed from the repositories?</p>

- Related to deleted (Bug #3216: some blacklisted packages not filtered)

#3 - 2022-04-05 08:31 PM - bill-auger

asp was added to the blacklist this week [#1755](#) - the conflict is in the new 'your-freedom' package - `pacman -Syi your-freedom` would reveal the conflict declaration, before installing the new package

anyone affected by this, will need to remove 'asp' or 'your-freedom' - "tough love" - sorry :)

if anyone needs arch PKGBUILDS; they can all be gotten from github - there is a plan to integrate git into octopi, to make octopi something like an AUR helper [#1035](#) - if that is done, it would restore some of the convenience of 'asp' (probably the primary one that people use asp for: circumventing 'your-freedom', to keep a blacklisted package installed and up-to-date); but parabola could provide that convenience feature, in that way, within the FSDG

- Status changed from unconfirmed to not-a-bug

#5 - 2022-04-06 11:12 AM - doolio

Thanks for explaining. I'll look at the blacklist first in future to avoid raising unnecessary BRs. I had installed asp in an attempt to install Nxyt but was ultimately unsuccessful.

#6 - 2022-04-06 09:17 PM - gap

What's Nxyt? I couldn't find it on the blacklist or in the Arch repos or on a web search.

#7 - 2022-04-06 09:31 PM - doolio

What's Nxyt?

An Emacs inspired browser <https://nyxt.atlas.engineer/>. It's in the AUR.

Edit: I just noticed I misspelled it in my original post.

[doolio](#), I opened a packaging request for you in [#3225](#). :)

#9 - 2022-04-07 07:36 AM - doolio

Thanks!
