Description

Clementine includes a plugin that displays the famous Nyan Cat meme as the equalizer's graphics. Unfortunately, the aforementioned character is copyrighted. But fortunately, a group has already released a replacement mascot, MooGNU, under the CC-By-SA license (verify at http://archive.org/details/M00GNU). I took their graphics and adapted them to the source file used by Clementine. Of course, it's also under the CC-By-SA (credit as Carlos Solís, just in case). I thought at first that it would only take a copy-paste to replace the image, but it seems that the whole program must be recompiled to apply the patched image.
