

libretools - Bug #333

[libremakepkg] local [repo] should be maximum priority by default, not minimum

| Description | |
| The local [repo] should be maximum priority (listed first), where currently it is appended to the end of the file, so it is minimum priority. | |
| For example, if jh-0.4 is on [java], and I have jh-0.4.1 on [repo], unless I manually moved repo up in pacman.conf, `pacman -S jh` will install the version from [java]. | |
