| Description | |
| <p>This package is in the AUR and is very popular. It is also meant to be a libre replacement for a proprietary tool which is very popular on Lusedows, which may help ease the switch over to GNU for some users.</p> | |
| <p>Potential freedom issues:</p> <ul style="list-style-type: none">- No license in the following dirs:<ul style="list-style-type: none">-- https://github.com/X0rg/CPU-X/tree/master/data/icons-- https://github.com/X0rg/CPU-X/tree/master/data/logos- Containers for nonlibre distros:<ul style="list-style-type: none">-- https://github.com/X0rg/CPU-X/tree/master/containers(AFAICT these are not included in the final package) | |
| <p>Potential technical issue:</p> <ul style="list-style-type: none">- Vended library:<ul style="list-style-type: none">-- https://github.com/X0rg/CPU-X/tree/master/src/dmidecode- Vended and heavily modified library:<ul style="list-style-type: none">-- https://github.com/X0rg/CPU-X/tree/master/src/bandwidth | |
| <p>Its dependencies are all in the repos and the PKGBUILD looks okay from a quick glance.</p> | |
| <p>This announcement (https://github.com/X0rg/CPU-X/wiki/future-of-project) explains the project is feature-complete and will only see minor maintenance like bug fixes.</p> | |
| <p>This could be a double-edged sword: it might require minimal maintenance for a long time, but eventually its dependencies will be deprecated and it will have to be updated.</p> | |
| <p>For instance, its GUI mode uses GTK3, but GTK4 is the latest version, so it will need to be ported to GTK4 when GTK3 is deprecated.</p> | |
