History

#1 - 2023-01-16 03:04 AM - bill-auger

lumping multiple concerns into the same ticket, doesnt improve track-ability (as a bug tracker normally would) - the email thread subjects are enough to allow people to follow each

to make them more trackable in the conventional sense, you could open pull requests on pagure (one per package) - a forge automatically organizes those, presents them in a uniform way, and makes them easily trackable

all activity (state changes, comments, etc) are posted to the mailing list - interested "watchers" may choose to track those pull requests, either via the pagure interface, or via the mailing list
