Description			
Hi!			
I found TVM, which seems to be a free alternative for deep learning, convolutional neural networks and similar applications. I haven't really audited the code (I don't know if it comes with blobs), but I did manage to install it and run it. I attach a PKGBUILD which will only work if you have the requirements with Python 3.8. Excuse me if I did something non-free, and remove if needed.
