<div><div><div>• Code to be run:</div><div><pre>\$ sudo freshclam</pre></div></div><div><div>• Expected result: Bytecode database to be updated.</div><div>• Actual result:</div><div><pre>ClamAV update process started at Sun Apr 9 15:28:55 2023 WARNING: Your ClamAV installation is OUTDATED! WARNING: Local version: 0.103.3 Recommended version: 0.103.8 DON'T PANIC! Read https://www.clamav.net/documents/upgrading-clamav daily.cld database is up-to-date (version: 26870, sigs: 2029068, f-level: 90, builder: raynman) main.cvd database is up-to-date (version: 62, sigs: 6647427, f-level: 90, builder: sigmgr) bytecode database available for update (local version: 333, remote version: 334) Current database is 1 version behind. Downloading database patch # 334... ERROR: cdiff_apply: lseek(desc, -350, SEEK_END) failed ERROR: downloadPatch: Can't apply patch The database server doesn't have the latest patch for the bytecode database (version 334). The server will likely have updated if you check again in a few hours.</pre></div></div></div>			

History

#1 - 2023-07-13 07:38 AM - wael

- % Done changed from 0 to 90
- Status changed from unconfirmed to not-a-bug

Please provide more context or even if this is still an issue, as with the default config I can confirm on two separate systems that it is synchronizing.

#2 - 2023-11-12 06:23 PM - mineral

Only Parabola was installed on the disk. I tried something and got the expected result.

I removed the package and also some related files:

```
$ sudo pacman -Rns clamav
$ sudo rm -r /var/lib/clamav
```

I reinstalled it and run:

```
$ sudo freshclam
```
