Packages - Bug #350

Please Import HandBrake From Arch Community Repo

2013-06-16 12:38 PM - jxself

Status:	fixed	**% Done:**	100%
Priority:	wish		
Assignee:	lukeshu

Description
The Arch Community Repo contains the packages handbrake & handbrake-cli. It would be very awesome if it was available in Parabola.

History

#2 - 2013-06-16 02:07 PM - fauno

Last time I tried to build it without faac I discovered two things:

- The developer(s) weren't very welcoming to the libre faac alternative (see their bug tracker, this may have changed)

- Handbrake doesn't have dependencies because the build system downloads the needed libraries and builds them in place.

I just decided it wasn't worth it at the moment :P

#3 - 2013-06-16 02:11 PM - fauno

seem like the arch packager made it use (some?) system libs:
https://projects.archlinux.org/svntogit/community.git/tree/trunk/PKGBUILD?h=packages/handbrake

#4 - 2013-06-16 04:10 PM - jxself

My understanding is that they dropped FAAC a while ago, based on https://trac.handbrake.fr/ticket/127

Since the dependencies are already available in Parabola, I submitted this. :)

#5 - 2013-06-20 02:23 AM - Jorginho

I am seeing, and it doesn't use a faac dependence, in arch packages' website doesn't appear.

I believe you encountered "The huge blocker here is that FF-AAC is currently an unusable piece of garbage." At first, this seems like not being welcoming. However, the developer who wrote that got involved in FF-AAC, and became the driving force behind FF-AAC development!

> - Handbrake doesn't have dependencies because the build system downloads the needed libraries and builds them in place.

I've got a work-around for this. It patches some of the dependencies, so a couple of them I had to keep building them in place; in those cases, I have a work-around to put them in source=(), so they are downloaded ahead of time.

> I just decided it wasn't worth it at the moment :P

User 'coffeeking', who is blind, reports that handbrake is the only one really usable by him.

Anyway, I've been trying to liberate handbrake 0.9.9. The transition to FF-AAC is complete in SVN, so now I'm waiting for the code to check out. I'm unsure whether I will package handbrake-svn, or backport the FAAC/FF-AAC stuff.

#7 - 2014-03-10 12:35 AM - lukeshu

- % Done changed from 0 to 50

Released on x86_64, is currently building for i686.

#8 - 2014-03-10 12:56 AM - lukeshu

- Status changed from open to fixed

- % Done changed from 50 to 100
