Packages - Bug #3502

[opencv] PKGBUILD issue

2023-06-23 07:35 PM - SolveFinder

Status:	in progress	**% Done:**	0%
Priority:	bug		
Assignee:			
Category:			

Description

Here is 121 line of https://git.parabola.nu/abslibre.git/tree/libre/opencv/PKGBUILD:

`_opts="${_opts/-DCPU_BASELINE_*/} ${per_arch_options}" # per-arch options`

Asterisk is removing every argument below "-DCPU_BASELINE_DISABLE=SSE3" which is probably not intended.

I've also updated the PKGBUILD according to
https://gitlab.archlinux.org/archlinux/packaging/packages/opencv/-/blob/main/PKGBUILD
This update will fix #3439

History

#1 - 2023-06-24 08:43 PM - bill-auger

- Status changed from unconfirmed to in progress

good catch - it was definitely not intended - the problem is that i have not yet been able to compile this version; so those changes were still a WIP - besides it direct dependents, 'opencv' has more problems to address

i have made progress recently (solved #3438), but it only compiles if it has internet access to download extra sources at build-time (#3107) - the new patch 82616eec.patch does not seem to be needed

#3068 (probably no longer relevant)
#3107
#3438 (probably solved per arch's recent openblas re-organization)
