Description	
<p>I was trying to compile mkinitcpio from abslibre (https://git.parabola.nu/abslibre.git/tree/nonsystemd/mkinitcpio/PKGBUILD) with asciidoc in makedepends. I got this error:</p> <pre> Traceback (most recent call last): File "/usr/bin/a2x", line 5, in <module> from asciidoc.a2x import cli ModuleNotFoundError: No module named 'asciidoc'</pre>	
<p>There's 2 versions of asciidoc: in extra and libre (the version from extra works fine). There's no asciidoc in blacklist.txt and abslibre.git</p> <p>What's wrong with version from extra and why there are both versions in repositories?</p>	

History

#1 - 2023-07-19 10:12 PM - bill-auger

asciidoc in libre needs to be deleted - it is no longer needed - use the one in extra

#2 - 2023-08-11 04:18 PM - bill-auger

- Status changed from unconfirmed to fixed
