<b>Description</b> for example: <a href="https://www.parabola.nu/mirrors/cyberbits.asia/">https://www.parabola.nu/mirrors/cyberbits.asia/</a>  it is currently the only such example; so this is still a hunch - however, i noticed a similar problem recently with yandex - they apparently had two separate replicas, one for IPv4 and one for IPv6 - parabolaweb only checks via IPv4 and it reported the mirror as out-of-sync - the IPv6 replica was up-to-date; but the IPv4 replica was not synch-ing - even their admin was confused at first, until i discovered the discrepancy between them
