

Packages - Bug #3536

Freedom Issue # 2890 (confirmed): [octopi:]: various issues

Octopi fails to start

2023-09-29 07:22 PM - Avron

Status: confirmed	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description <ul style="list-style-type: none">• steps to reproduce: Install octopi, start it.• expected result: Octopi becomes visible.• actual result: octopi: symbol lookup error: octopi: undefined symbol: _ZN11QTermWidget20setScrollBarPositionENS_17ScrollBarPositionE <p>There was https://github.com/aarnt/octopi/issues/519 with the same error but with older versions. The discussion says archlinux solved the issue by rebuilding octopi. Perhaps this is what is needed here.</p>

- Parent task set to #2890

- Status changed from unconfirmed to confirmed

adding this to [#2890](#) - there are many things that need checking and possibly re-working - at least this should probably be pinned to 'qtermwidget' or 'qt5-base', though im not sure which

there was a new release upstream just last week, so this is a great time to do it all
