

Packages - Bug #3557

Repos out of sync with upstream for armv7h and x86_64 after 2023-11-26

2023-11-28 07:43 AM - grizzlyuser

Status:	fixed	% Done:	0%
Priority:	bug		
Assignee:			
Category:			
Description			
Very similar to the recent issues [1], [2], [3], [4]. Not sure about i686, as Arch Linux 32 seems to be lagging behind regular Arch Linux currently.			
steps to reproduce:			
1) open https://www.parabola.nu/packages/?sort=-last_update&arch=x86_64&q=&maintainer=&flagged=			
2) compare with https://archlinux.org/packages/?sort=-last_update			
3) Remove all servers except the following from /etc/pacman.d/mirrorlist to keep only the main repo and exclude all the mirrors			
Server = https://repo.parabola.nu/\$repo/os/\$arch			
4) # pacman -Syy			
5) pacman -Ss '^((perl ugrep)\$'			
expected result:			
Step 2: maximum 1 day lag between Parabola repos and upstream repos, all upstream updates except blacklisted ones are available in Parabola			
Step 5: core/perl 5.38.1-1 (or newer) and extra/ugrep 4.3.4-1 (or newer) is in the output since it was updated upstream on 2023-10-13			
actual result:			
Step 2: it looks like Parabola repos stopped syncing correctly after 2023-11-26, because no updated packages are visible since then, while upstream has dozens (hundreds?) at the same time.			
Step 5: core/perl 5.38.0-1 and extra/ugrep 4.3.3-1 are in the output			
note:			
It looks like armv7h has the same issue.

History

#1 - 2023-11-28 07:45 AM - grizzlyuser

Correction, expected result, Step 5: core/perl 5.38.1-1 (or newer) and extra/ugrep 4.3.4-1 (or newer) is in the output since they were updated upstream on 2023-11-27 and 2023-11-26 respectively.

- Status changed from unconfirmed to confirmed

I can confirm this issue, seems like sync on the server failed again, also we do require cleanup on some packages from Community now that it was folded into Extra.

#3 - 2023-12-28 04:18 AM - bill-auger

ok, i will close this one now - it looks like i fixed it good this time (knock on wood)

WRT community, there is a ticket for that (#3501) - still arch32 has about 300 legitimate packages in [community] - those packages are only harmless cruft - i will re-open #3501 for this task
