

Packages - Bug #3586

[clamav] Outdated, vulnrable

2024-02-18 09:18 PM - wael

Status: not-a-bug	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description	
The packaged version is terribly outdated, and potentially open to many vulnerabilities, not least of which: CVE-2024-20328. I've sent a patch on the dev mailing list to update it. I have not managed to get it to build, as there is an issue with the json library dependency, though it is a start nonetheless.	

History

#1 - 2024-02-20 01:08 AM - anonymous

ClamAV package from Arch was [blacklisted](#) with string clamav:clamav:::[semifree] has nonfree unrar support for RAR into libclamunrar So I think need to return ./configure --disable-unrar section in PKGBUILD

#2 - 2024-02-25 05:56 PM - bill-auger

- Status changed from confirmed to not-a-bug

ima close this one too - this one is "vulnerable" only because it is "outdated" - that is a actually very peculiar situation - in this case, the maintainer should be taking better care of it

so regardless that it needs work and is technically "vulnerable", for this package it is simply a routine maintenance concern - there is a patch on the mailing list and ideally, the Maintainer should respond - if not, try sending email directly to the Maintainer - if the maintainer does not respond, that would perhaps be worthy of a bug report (eg: "package maintainer does not respond to email")
