i can not reproduce this - i tried with systemd and nonsystemd, and with extra/claws-mail and nonprism/claws-mail - all parabola x86\_64 combinations work for me

is this about a different arch than x86\_64?

can you show the output of these commands:

```
$ pacman -Qs claws-mail
$ pacman -Qs libldap
$ ldd /usr/bin/claws-mail
```

Hi,

sorry, shortly after publishing the post I realized that I forgot to add that I use an i686-system. Editing the post subsequently wasn't possible.

i could not reproduce this - claws-mail works for me with both versions of libldap in the arch32 repos; but i was not able to migrate completely to staging

you will need to be patient to use i686 - it is becoming more difficult to support each day - the arch34 folks are doing their best - some things are known to be broken - generally, i think you want to have all -testing and -staging repos enabled - but no promises - some stuff works and other stuff does not

i would try to enable all of these repos:

- core
- core-testing
- core-staging
- extra
- extra-testing
- extra-staging

then run `$ pacman -Syuu`
