Description	
<p>Yesterday I installed parabola again on my notebook and had problems when it came to update parabola-keyring.</p> <p>That is, I executed "# pacman -Sy parabola-keyring" as asked for in the step "Verification of package signatures" of the installation guide.</p> <p>This would successfully update the package databases and download the package, but fail during the installation with the error message (transcription errors possible):</p> <pre>error: parabola-keyring: signature from "C92BAA713B8D53D3CAE63FC9E6974752F9704456" is unknown trust !! File /var/cache/pacman/pkg/parabola-keyring-20131022-1-any.pkg.tar.xz is corrupted (invalid or corrupted packages (PGP signature)). Do you want to delete it? [Y/n] y error: failed to commit transaction (invalid or corrupted package (PGP signature)) Errrs ocured, no packages were upgradeed.</pre> <p>Installation via "pacman -U /var/cache/pacman/pkg/parabola-keyring-20131022-1-any.pkg.tar.xz" (local install with optional signature requirement) would work.</p>

- Status changed from open to fixed

"pacman -Sy parabola-keyring" works now.
