

Installation Media - Bug #465

Parabola ISO

2014-01-15 05:38 PM - pecg

Status:	fixed	% Done:	100%

Description			
Yesterday I tried to install parabola from scratch instead of liberating Arch (I won't do that), the iso is from september 2013. I encounter some issues regarding this topic:			
<ul style="list-style-type: none">• The parabola-keyring needs to be upgraded because packages' integrity verification failed saying it couldn't verify Nicolás Reynolds (fauno) key. I talked to fauno and he said that he updated his keys a couple of months ago so the problem is that the new package are signed with the new fauno's key.• /etc/pacman.d/mirrorlist is out of date, it still has the repos that where down some months ago.• When I tried to "# mkinitcpio linux-libre" an error jumped saying: "/lib/modules/3.10-10-1-LINUX-LIBRE" is not a valid kernel module directory. Appearantly the module in question is not the same as the one downloded with pacstrap, so they make a conflict (at least I think that's the reason)			
We should update the iso because there are many other peoples that won't know that to do.			
Thanks, in advance			

History

#1 - 2014-05-23 12:02 PM - Anonymous

- Project changed from Packages to Installation Media
- Description updated

#2 - 2014-10-03 05:18 PM - alfplayer

- Assignee deleted (alfplayer)

Gravi has been working on this.

#3 - 2014-11-27 12:52 PM - Anonymous

- Assignee set to Gravi

#4 - 2014-11-27 09:58 PM - Gravi

- % Done changed from 0 to 100
- Status changed from open to fixed

This one is very old.

ISOs will be released the first day of every even month, or every three up to 4 per year.

This will be announced clearly at the beginning of 2015, along with the series of different releases (presumably 3 flavours per release)

- Parabola Minimal (Normal release)
- Parabola X11 (X11+i3+artwork)
- TalkingParabola (Normal release with accesibility features for blind people)
