

Packages - Bug #47

Linux-Libre ipw2?00 modules

2012-03-16 05:30 PM - kete

Status: fixed	% Done: 100%
Priority: bug	
Assignee:	
Category:	
Description	
Linux-Libre can be built without support for the ipw2200 and ipw2100 modules because these are firmware for Intel PRO/Wireless devices. With support for these modules, I had to blacklist them, so udev would start up a few minutes quicker. Regards
