Description Hi. I am building ath9k-htc-firmware. The first error was solved by the following http://comments.gmane.org/gmane.linux.distributions.parabola.devel/1701 and I have got the the following error then. I tried to post the above URL and also https://lists.parabolagnulinux.org/mailman/listinfo/assist but the posts don't appear, so I ask here. Please help if having any idea. make ² : Entering directory '/mnt/tmp/taro-tmp/abslibre/libre/ath9k-htc-firmware/src/open-ath9k-htc-firmware-1.3.2/target_firmware/build/k2' [93%] Generating fw.elf [96%] Generating fw.bin /usr/bin/objcopy: Unable to recognise the format of the input file `fw.elf' /usr/bin/objcopy: --change-section-vma .text+0xffffffffc00000 never used /usr/bin/objcopy: --change-section-lma .text+0xffffffffc00000 never used CMakeFiles/gen-firmware.dir/build.make:59: recipe for target 'fw.bin' failed make ² : *** [fw.bin] Error 1 make ² : Leaving directory '/mnt/tmp/taro-tmp/abslibre/libre/ath9k-htc-firmware/'

The (temporary) solution, which works for me, is shown at:

<https://lists.parabolagnulinux.org/pipermail/dev/2014-February/002095.html>

or

<http://comments.gmane.org/gmane.linux.distributions.parabola.devel/1701>

#2 - 2014-02-22 03:32 PM - Anonymous

- Status changed from open to fixed

it was solved adding symlinks on xtensa packages [0]. thanks for the report!
