Description I'm trying to use OpenRedmine (https://play.google.com/store/apps/details?id=jp.redmine.redmineclient) with this tracker, but I'm not able to get my API access key. Is this redmine 1.2 or later?

This is Redmine 2.4.1.stable.

Is the issue perhaps that your phone doesn't like the SSL certificate for this domain?

I've enabled the REST API (and JSONP). Check if it works now.
