

pacman2pacman - Bug #537

pacman2pacman is fetching torrents only from <http://repo.parabolagnulinux.org/torrents/>

Description	
To increase redundancy other servers could be added so pacman2pacman works when the server "repo" is not working.	

History

Using a separate mirror list can cause package timing issues (e.g. repo has newer packages than other mirrors). Instead, pacman2pacman can read the pacman mirrorlist which is what pacman does by default. If the same mirror list is used, disabling pacman2pacman would result in pacman installing packages mostly synchronized with packages previously fetched by pacman2pacman (like enabling pacman2pacman which would fetch torrents from the same mirror).

#2 - 2014-06-01 09:07 PM - xylon

But are people actually mirroring the torrent files?

#3 - 2014-06-01 09:27 PM - alfplayer

Yes, they have torrents/ (I've just checked them all except parabola.fryxell.info).
