

## pacman2pacman - Bug #544

### Make pacman2pacman re-write the webseeds in the torrent to use the user's default mirror

2014-06-11 02:24 PM - xylon

<b>Description</b> This should make it faster because it can download from the user's chosen mirror, which may be closer or faster.  Here is an example that I just tried. It replaces ALL of the webseeds in the torrent with just one, specific one. Where is said `url-listl82:` the 82 is the length of the webseed string.  <code>sed 's#url-listl.\+.pkg.tar.xz#url-listl82:https://parabola.goodgnus.com.ar/pool/packages/zziplib-0.13.62-2-x86_64.pkg.tar.xz#' &lt; zziplib-0.13.62-2-x86_64.pkg.tar.xz.torrent &gt; zziplib-0.13.62-2-x86_64.pkg.tar.xz.torrent.modified</code>
