

Servers - Bug #574

[wiki] search is broken

2014-07-16 07:46 PM - mtjm

Status: fixed	% Done: 0%
Priority: broken	
Assignee: fauno	
Category:	
Description	
Search (e.g. https://wiki.parabolagnulinux.org/index.php?title=Special%3ASearch&search=mips) gives this error:	
Database error	
A database query error has occurred. This may indicate a bug in the software.	
In error log:	
PHP message:	
PHP Warning: is_executable(): open_basedir restriction in effect. File(/usr/bin/php) is not within the allowed path(s): (/srv/http/wiki:/usr/share/pear) in /srv/http/wiki/includes/Wiki.php on line 655	
PHP message: PHP Notice: Uncommitted DB writes (transaction from DatabaseBase::query (WikiPage::pageData)). in /srv/http/wiki/includes/db/Database.php on line 3944	
https://bugzilla.wikimedia.org/show_bug.cgi?id=56269 has a similar error, suggests running update.php which fixed it here once. It also shows that this message is caused by a different error, I haven't found what it is.
