| <b>Description</b><br>gnustep-base configure script fails with "/usr/bin/ld: .gnu.hash is incompatible with the MIPS ABI" error. attaching log |                   |

#### History

##### #2 - 2012-04-02 08:39 AM - mtjm

gnustep-make is x86\_64-specific despite being "any" arch package, build it separately for mips64el. Although it would be better if it used LDFLAGS specified when running gnustep-base's configure instead of hardcoding ones obtained by gnustep-make's configure.

##### #3 - 2012-05-06 01:01 PM - mtjm

Solved by using mips64el-specific gnustep-make.

##### #4 - 2016-05-12 12:29 AM - Anonymous

- Project changed from 3 to Ports
