libretools - Bug #627

Package libredbdiff configuration files

2014-12-21 06:52 PM - alfplayer

Status:	fixed	**% Done:**	100%
Priority:	feature		
Assignee:	lukeshu		
Category:			

Description
To simplify greatly libredbdiff, the code to install these configuration files can be removed:

```
pacman.conf.parabola
pacman.conf.archlinux
mirrorlist.parabola
mirrorlist.archlinux
```

Libredbdiff installs these to /etc/libredbdiff/ by default. Libretools can package these files there or in another directory.

Latest version of libredbdiff:
https://projects.parabola.nu/packages/libretools.git/tree/src/abslibre-tools/libredbdiff?id=575768d7c68fbbc674505ee0d56aac3cddd0f247
Proposed version of libredbdiff, equal to the current version minus configuration files initialization:
http://ix.io/4Xb

As I show in https://labs.parabola.nu/issues/623#note-3 Arch's devtools includes pacman.conf files. Pacman configuration files could be used by other libretools scripts.

History

#1 - 2014-12-21 07:16 PM - alfplayer

Also, variables at the beginning of libredbdiff should be in a configuration file (libredbdiff.conf?).

#2 - 2014-12-24 06:42 PM - alfplayer

If the directory changes, a post_upgrade warning is necessary. I recommend this:

```
echo "Libredbdiff configuration files are now in the directory /etc/new_dir. Directory /etc/libredbdiff is not
 used anymore by Libredbdiff."
```

Do it!

The golden rule, passed down to me: Do what you want, as long as you don't break anything.

(though I must confess, on occasion, I have broken things)

If you need help wrangling the Makefiles, ping me on IRC.

#4 - 2016-05-31 06:30 PM - lukeshu

- Assignee set to alfplayer

#5 - 2017-05-02 02:01 AM - lukeshu

- Target version set to 20170505

#6 - 2017-05-05 10:53 PM - lukeshu

- % Done changed from 0 to 100

- Assignee changed from alfplayer to lukeshu

- Status changed from open to fixed

In git, kinda!
