Well, did you try running librechroot run pacman-db-upgrade?

#3 - 2015-01-26 04:30 PM - aurelien

- Status changed from open to fixed

```
Alfplayer help me to correct the situation like this :
$ sudo rm -rf /var/lib/archbuild/*
$ sudo pacman-db-upgrade
$ sudo librechroot update
```

#4 - 2015-01-26 05:13 PM - alfplayer

Running pacman-db-upgrade on the host upgrades the host system DB only, so it's not necessary for libretools. This is not a libretools issue strictly. After deleting /var/lib/archbuild/* librechroot installs a system with an upgraded pacman DB, and other chroots are then copied from that chroot, so DBs on copies have the new DB version.
