

## Packages - Packaging Request #671

### Pumpa and Dianara are a version behind.

<b>Description</b> Luke Shumaker packaged Dianara and Pumpa for pcr, but both apps released another version last year. Could we get an upgrade, or should we go to AUR?	

#### History

the version of pumpa in pcr is 0.8.2-1, with verion 0.9+ editing of posts was added (this is an important feature IMO). pumpa-git from AUR is one of the few AUR packages I use (it installs 0.9+ currently) - I actually emailed the pumpa-git AUR maintainer to ask if parabola could use his AUR package, but I haven't heard back.
