

Servers - Bug #725

Inaccessible wiki page

2015-05-19 02:52 PM - Anonymous

Status: fixed	% Done: 100%
Priority: bug	
Assignee: lukeshu	
Category:	
Description	
There is a conflict between wiki pages and MediaWiki files which use the same name, for instance between the page I wrote and the file named FAQ:	
<ul style="list-style-type: none">• https://wiki.parabola.nu/index.php/FAQ• https://wiki.parabola.nu/FAQ	
Solution to this would be to namespace wiki pages (e.g. in the same way Arch wiki does), but since I can't find any other example right now I guess deleting useless FAQ file would do the job. Expanding the name to "Frequently asked questions" (not KISS anymore!) would also do :).

- Project changed from Documentation to Servers

Fixed!

I *really* don't like the way ArchWiki does it, they aren't [cool URLs](#).

Instead, I've changed the nginx config from basically a blacklist of files to not serve into a whitelist of files to serve. This also fixed a security issue (since /serialized/ wasn't blacklisted).
