<b>Description</b>			
<p>As I wrote in <a href="https://labs.parabola.nu/issues/700">https://labs.parabola.nu/issues/700</a> I still had the following problem during the build of icedove-1:31.7.0.deb1-1. And if I make the symbolic link like: /usr/lib# ln -s libvpx.so.2.0.0 libvpx.so.1 the build finished without error and the new icedove works good so far.</p>
