Description	
<p>I was using LXDE. Trying Claws-mail, a compiled version of evolution, lxde terminals and iceweasel.</p> <p>These errors were shown in tty1, where I launched Xs:</p> <p>lxpanel...: Gdk-CRITICAL 'GDK_IS_WINDOW (window)' failed. lxpanel...: GLib-GObject-CRITICAL 'G_IS_OBJECT (object)' failed.</p> <p>The result was:</p> <ol style="list-style-type: none">1. I couldn't longer select text in the terminal with the mouse, but i could change between windows/terminals and entering commands.2. Iceweasel didn't answer to anything, only to killall -9. If I launched it again, it was freezed also in the restore tabs initial page, and I had to kill it by terminal again. <p>I killed X and when I started LXDE again everything was working fine again.</p>

Probably the title of this bug I reported should be more generic, since it seems related to Gdk and no application specific.

I can add than although when the bug is manifested (which no return to a stable desktop) and the mouse starts becoming unuseful, you can yet use the keyboard shortcuts of the desktop without problems.
