Description

`rsync: send_files failed to open "staging/os/i686/staging.abs.tar.gz" (in repos): Permission denied (13)`
`rsync: send_files failed to open "staging/os/x86_64/staging.abs.tar.gz" (in repos): Permission denied (13)`
`rsync error: some files/attrs were not transferred (see previous errors) (code 23) at main.c(1536) [generator=3.0.9]`
 	
I've just fixed the permission flags but I don't know what caused it. Maybe it's a one-time failure.
