<b>Description</b> Hello, I have been unable to login to ssh. When I try to use SSH I get: Permission denied (public key) Here you can see my public key: <a href="http://termbin.com/i2pw">http://termbin.com/i2pw</a>  And here is the output I am seeing: <a href="http://termbin.com/4unl">http://termbin.com/4unl</a>  The problem would appear to be the key is not being fully parsed from the .yml file by Ruby. <a href="https://projects.parabola.nu/hackers.git/plain/bin/ssh-list-authorized-keys">https://projects.parabola.nu/hackers.git/plain/bin/ssh-list-authorized-keys</a>  However I have no idea how the Ruby language works.  Hence I am opening this support ticket in hopes of eventually being able to help with Parabola packaging. :)	

#### History

---

##### #1 - 2015-07-18 12:21 PM - alfplayer

I created a test user using a new RSA key pair and a mostly default configuration, and it worked.

##### #2 - 2015-07-20 11:37 PM - alfplayer

- Status changed from open to not-a-bug

The username wasn't "repo" (wrong client configuration).
