

Branding - Bug #781

lukeshu screwed up the tittle in the "i"s in the logotype

2015-08-13 02:39 AM - lukeshu

Status:	open	% Done:	0%
Priority:	bug		
Assignee:	lukeshu		
Category:			
Description			
In the originals of the logotypes, Shackra had manually rotated the tittle on the "i"s in "Linux-libre" to make them diamonds (<>) instead of squares ([]). When I converted them to use the plain <text> SVG element, I did not preserve this. I missed this because of the size I was rendering them at.			

History

#1 - 2015-10-20 01:54 PM - Anonymous

coadde had created fonts based on URW Gothic called URW Gothic Diamond [0]. The difference between them is that URW Gothic Diamond contains font letters (eg. "i", ";", ":" "j") with diamonds (<>) instead of squares ([]). Since we have our own fonts, we could use it for our logo and similar things :)
