<b>Description</b>	
<p>[abslibre.git] I propose [pcr] and [~&lt;user&gt;] repos to separate branches, like:</p> <ul style="list-style-type: none"><li>• master</li><li>• pcr</li><li>• &lt;user&gt;/repo</li></ul> <p>To avoid conflicts pushes.</p>

Is it so hard to rebase before pushing?

It would be nice to have a single branch which shows which packages are on repo (possibly using submodules for specific packages), but we probably won't do this. Otherwise PBS should help.
