Description

Hello,
Thank you for adding biber - this should allow me to switch to fully free libre/texlive-bin package.
The only issue for now is some strange error I get when try to use it:

```
/usr/bin/perl: symbol lookup error: /usr/lib/perl5/vendor_perl/auto/autovivification/autovivificat
ion.so: undefined symbol: Perl_xs_apiversion_bootcheck
```

How could this be solved?

I've pushed a new version of perl-autovivification [0], please check if now it works

[0]:https://projects.parabola.nu/abslibre.git/commit/pcr/perl-autovivification?id=a357535b64d2b146aeb708f8ef593c1ec8eb3087

- % Done changed from 100 to 0

Seems like Perl was changed again. Please, rebuild the biber again.

```
/usr/bin/perl: symbol lookup error: /usr/lib/perl5/vendor_perl/auto/Date/Simple/Simple.so: undefined symbol: P
erl_xs_apiversion_bootcheck
```

P.S. As I'm not allowed to reopen bugs, should I create a new ones every time Perl would change again?

- Status changed from in progress to fixed

#9 - 2016-01-03 05:51 PM - korobkov

- % Done changed from 100 to 0

Thanks and sorry for bothering you again: this time with biblatex-biber-2.3-1-any

```
/usr/bin/perl: symbol lookup error: /usr/lib/perl5/site_perl/auto/Unicode/LineBreak/LineBreak.so: undefined sy
mbol: Perl_xs_apiversion_bootcheck
```

I think perl-unicode-gcstring package should be rebuilt to fix that issue

I've picked every possible update:

```
pcr/perl-business-isbn      2.09-1          -> 2.010-1
pcr/perl-business-isbn-data 20140910.002-1 -> 20140910.003-1
pcr/perl-encode-jis2k       0.02-1          -> 0.03-1
pcr/perl-regexp-common      2013031301-4   -> 2015121601-1
pcr/perl-text-bibtex        0.70-2          -> 0.71-1
pcr/perl-unicode-gcstring   2014.06-1       -> 2015.12-2
```

the bug became this:

```
/usr/bin/perl: symbol lookup error: /usr/lib/perl5/vendor_perl/auto/Date/Simple/Simple.so: undefined symbol: P
erl_xs_apiversion_bootcheck
```

that issue comes from perl-date-simple package, maybe we should rebuild all perl packages, however i would rebuilt just perl-date-simple for now and see if could appears another issue from any perl package to avoid rebuild unneeded stuff.

#16 - 2016-01-04 04:15 PM - Anonymous

perl-date-simple pushed!

#17 - 2016-01-04 06:47 PM - korobkov

- % Done changed from 50 to 100

Thank you! :) All is OK now.
