Description			
gnome software is a nice toll to browse package but in parabola some category wont show any package and the loading is kinda stuck. if someone want to fix , I suggest to rebranding it for better integration. screnshots included below.

I watched the same behaviour, but in Archlinux as well. Hope that it will be fixed upstream with Gnome 3.18. Very annoying indeed.

#3 - 2015-10-13 05:34 AM - totalchaos

Unfortunately, the same behaviour on 3.18 as well :-)

- Status changed from open to in progress

#6 - 2015-10-15 06:48 AM - Anonymous

- Subject changed from [packagekit] problem with gnome-software to [archlinux-appstream-data] problem with gnome-software

it should be rebranding to parabola-appstream-data, also AppStream XML files (appstream.xml, appstream-failed.xml and appstream-icons) should be rebuilt with our unified software metadata database instead of Arch to solve this issue.

- Priority changed from bug to freedom issue

Also archlinux-appstream-data contains metadata info about nonfree packages on those AppStream XML files

- Related to Packaging Request #1413: [partial fixes] Package deblobed version of gnome-software. Was: [gnome-software][discover] offers non-free software & shows incorrect licenses added

#10 - 2017-07-11 08:35 AM - isacdaavid

the first solution strategy that came to my mind to automate the cleaning of those files was using an XML parser interfacing with the blacklist to prune proprietary nodes. however that's only half a solution.

this is what Arch and Debian use to generate AppStream metadata collections from their repositories: <https://github.com/ximion/appstream-generator>

why not do the same?
