another feature example:

- chaces manager
- conf files backup-er
- user profiles,passwords,and privilages manager
- packages downgrade-er

Not sure it could be possible.

Every user have their own way of use, some use gnome, other ratpoison ...

And that is just for the desktop or windows manager.

I have tried to search for one in ArchLinux and it does not seems to have one.

There is a good example: https://aur.archlinux.org/packages/?O=0&SeB=nd&K=setting+manager&outdated=&SB=n&SO=a&PP=50&do_Search=Go as you can see there is different one for each type of use.

thanks for the info. I'm just wondering if we can make cross setting manager ex: opensuse yast, someone even had trying to import it to ubuntu. I think this is because yast is a application so it wont interfere with window manager.
