Description <p>Since the recent updates of both icecat and iceweasel web browsers, facebook.com is not displaying correctly. Only plain text and no images appears. There is this workaround, when i change the site's address to http://m.facebook.com (facebook mobile) and login from there. And then http://www.facebook.com is sort of working, but lot of the photos and profile images are not shown. Currently i switched to Debian's Iceweasel from AUR (iceweasel-bin), and there facebook.com is working the way it suppose to be. I need facebook to work correctly on firefox based web browser, because i cannot make FB audio and video calls fro webkit based browsers, only chrome and firefox is supported. I am not suggesting using iceweasel-bin as a permanent solution, but my options are very limited at this moment.</p>	

History
