The issue here is that ec.doc.tar.xz (that contains license files) is not included inside texlive-core tarball redistributed by Arch guys. doc files are required in its license [0](#) because says: "Redistribution of unchanged files is allowed provided that all files listed in the file 00files.txt are distributed, including this file."

Another [texlive-core issues](#) are related on the same problem, tarball redistributed by Arch doesn't contains source and doc (that contains license too) tarballs that are available from <http://mirror.ctan.org/systems/texlive/tlnet/archive/>

I'm relegating this task to coadde...

I am marking this as duplicate of [#490](#), because that was reported earlier; the issue seems to be the same (license), there is no substantial loss of information between the two bug reports, and to keep it manageable. Thanks for reporting!
